

MAJJI PRASAD

Software Engineer

+91 9949490504 | majjiprasad9949@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

Computer Science graduate with hands-on experience in developing scalable applications using Python, Django, and machine learning. Built a blockchain-based credential verification system and ML models achieving up to 89% accuracy. Strong foundation in data structures, algorithms, SQL, and SDLC with an agile mindset. Passionate about leveraging technology to solve real-world business problems and deliver impactful solutions in a consulting environment.

Education

Bachelor of Technology in Computer Science and Engineering
Malla Reddy Engineering College and Management Sciences

2021 – 2025
CGPA: 7.87 / 10

Technical Skills

- **Programming Languages:** Python
- **Web Technologies:** HTML5, CSS3, JavaScript
- **Backend:** Django
- **Databases:** MySQL, Oracle SQL
- **Concepts:** Data Structures, Algorithms, OOP, SDLC
- **Tools & Platforms:** Git, VS Code, GitHub, Google Workspace, MS Office

Work Experience

Web Development Intern

TECHOCTANET PVT LTD | May 2024 – June 2024

- Developed responsive and cross-browser compatible web interfaces using HTML5, CSS3, and JavaScript.
- Integrated frontend components with REST APIs for dynamic data handling and real-time interaction.
- Collaborated using Git and GitHub with branching and pull request workflows.
- Converted UI/UX wireframes into functional, reusable web components following clean coding practices.
- Worked within SDLC and agile methodologies during development.

Projects

Blockchain-Based Credential Verification System

- Developed a decentralized platform for secure academic credential verification using blockchain.
- Implemented role-based access control (RBAC) for multi-user system functionality.
- Used SHA-256 hashing to ensure tamper-proof data integrity.
- Reduced manual verification time by ~30%, improving efficiency and transparency.
- **Technologies Used:** Python, Django, REST APIs, Blockchain, MongoDB, Ethereum

ML - Based Classification of Structural Damage in Civil Infrastructure

- Built a machine learning model to classify infrastructure damage from images.
- Performed preprocessing, feature extraction, and handled class imbalance using SMOTE.
- Implemented SVM and Random Forest achieving **~89% accuracy**.
- Visualized model performance using confusion matrix and Matplotlib
- **Technologies Used:** Python, Jupyter Notebook, OpenCV, Scikit-learn, NumPy, Pandas, Matplotlib, Git, SMOTE, SVM, Random Forest.

Certifications

- Databases for Developers – Oracle
- Web Development – NASSCOM Foundation
- Machine Learning with Python – IBM
- AWS Technical Essentials – AWS
