Summary

Recent graduate with a strong foundation in programming languages including Python, C, and C++. Passionate about software development with a focus on problem-solving and eager to apply technical skills to real-world projects. Demonstrated ability to drive innovation through coding, debugging, and collaborative teamwork in various development environments.

Education

Geethanjali College of Engineering	B.Tech in ECE	CGPA: 6.4	Jun 2019 – May 2023
Narayana Junior College	Intermediate, MPC	CGPA : 8.0	July 2017 – May 2019
ST.Mary's EM School	SSC	CGPA : 9.0	2017

Skills

Technologies and Tools: Python, C, C++, Data Analysis, Data Visualization, Microsoft Excel, PowerPoint, Visual Studio Code, Jupyter Notebook, GitHub, Postman

Soft Skills: Communication, Time Management, Adaptability, Logical Thinking, Teamwork, Interpersonal skills

Experience

Trainee Analyst, Machint Solutions – Hyderabad May 2024 – Jan 2025

- Worked with large amounts of data using Python (Pandas, NumPy) and Excel to find useful insights.
- Created interactive dashboards in Power BI and Tableau to show important business metrics clearly.
- Made charts and reports in Excel and PowerPoint for team and management presentations.
- Built machine learning models to understand customer behavior and help improve marketing results.
- Used Excel (VLOOKUP and formulas) to build financial models and dashboards..
- Prepared professional reports and presentations to explain data insights to non-technical stakeholders.

Projects

PACS Digitization Ticketing Tool– NABARD Project

- Built a ticketing tool for the NABARD project to manage and track issues in PACS digitization. Enabled ticket creation, assignment, and task automation for better workflow and team collaboration. Supported multichannel ticket submission, added a knowledge base for faster issue resolution, and included analytics for tracking progress and performance.

Weapon Detection Using Python-OpenCV

- Developed an AI-based system using Python and OpenCV to detect weapons in live video. Trained on images of guns and knives, with real-time alerts for security. Used transfer learning to improve speed and accuracy, making it ideal for surveillance.

Contact-less Library Management System

- Created a contactless Library Management System using RFID and barcode scanning to make borrowing and returning books easier and safer. Added features like online reservations, real-time book tracking, and automated due date alerts. Improved library efficiency and user experience with a tech-driven, touch-free solution.

Certifications

1. 100 Days of Code: The Complete Python Pro Bootcamp - Udemy
2. Python Certification Training Course - Edureka
3. Artificial Intelligence powered by IBM - SmartInternz
